

Item # PL-CLR, Photoinitiator Blend

PL-CLR is a liquid photoinitiator compound developed specifically for thicker clear films where low yellowing is necessary. It provides a perfect balance between surface cure and through cure to enable the best possible adhesion in these systems. Because it's a liquid, it works well as a press side additive for the printer.

PL-CLR is soluble in most monomers, oligomers and pre-polymers. It is insoluble in H₂O.

Typical Applications: White and pastel inks and coatings, thicker clear coatings for graphic arts, wood, plastics & metals. Adhesives.

Performance Properties:

- Very fast curing
- Low yellowing
- Excellent through and surface cure
- Easy to use liquid

TYPICAL PROPERTIES

Appearance	Light yellow liquid
Viscosity @ 25°C (cps)	6000 - 8000
Boiling point	>250°C
Specific Gravity	1.18 g/mL
Odor	Faint, characteristic
Usage Levels	2 - 8%
